UNICREDIT SME

ALTERNATIVE DATA INTELLIGENCE ENGINE

DETERMINISTIC • EXPLAINABLE • COMPLIANT

The goal is not to replace analysts, but to enhance SME pre-screening with structured intelligence.

TABLE OF CONTENTS

UNICREDIT SME ALTERNATIVE DATA INTELLIGENCE ENGINE

A **deterministic**, **explainable** SME intelligence framework built using **compliant** public alternative data.

THREE PILLARS OF CREDIBILITY

The goal: Not to replace analysts, but to **enhance SME pre-screening** with structured intelligence.

DETERMINISTIC

Predictable outcomes based on fixed rules

EXPLAINABLE

Transparent logic, no black boxes

COMPLIANT

Adhering to strict regulatory standards

SME ONBOARDING CHALLENGES

01 Financial statements are often **delayed or incomplete**

02 Manual research is **time-consuming and inconsistent**

03 Relationship managers lack **structured pre-screening tools**

04 Alternative public data exists, but is **fragmented and underutilized**

Can we structure public alternative signals into a **scalable, explainable** SME intelligence layer?

Not to automate credit decisions — but to support **commercial prioritization** and **early risk awareness.**

WHAT THIS IS (AND ISN'T)

NOT

- Not a credit approval model
- Not a black-box AI
- Not replacing analysts

IS

- **Deterministic signal engine**
- **Commercial opportunity layer**
- **Risk early-warning support**

AI is optional and used only to generate a narrative summary.
The score itself is entirely **rule-based and auditable**.

ALTERNATIVE DATA USED

DATA CATEGORIES

1. **Official digital footprint**
   Website structure, Careers/News/Events, Social presence
2. **Corporate identity (Wikidata)**
   Public company status, Parent group, Country
3. **Market & public news signals**
   Keyword-based adverse media detection
4. **Review platform footprint**
   Presence detection only

DELIBERATE EXCLUSIONS

We deliberately avoid scraping restricted platforms such as LinkedIn or Google Reviews.

WHY?

- Terms-of-service constraints
- Data governance requirements
- Reputational risk considerations

In a real UniCredit environment, these data sources would be accessed through **licensed APIs or internal agreements**, ensuring full compliance and scalability.

DESIGNED FOR A REGULATED BANKING ENVIRONMENT

- **Fully deterministic scoring logic**
- **Transparent rule-based criteria**
- **No hidden weights**
- **No opaque machine learning**
- **All signals auditable and traceable**

This architecture aligns with **explainability requirements** and **internal risk governance standards**.

THE MODEL

DIGITAL MATURITY	GROWTH SIGNALS	TRUST & REPUTATION	BANCABILITY
(0–25)	(0–30)	(0–20)	(0–25)

ENHANCEMENTS

- Risk Severity Logic
- ESG Proxy Indicator
- Governance Maturity
- Opportunity vs Risk Matrix

The final score is simply the sum of fully auditable **rule-based components**.

SYSTEM ARCHITECTURE

1. Public Signals INPUT LAYER
Raw structured inputs from APIs, Web Structure, and Media

2. Feature Extraction PROCESSING LAYER
Rule-based transformation and normalization of data signals

3. Deterministic 4-Pillar Scoring CORE ENGINE
Transparent, auditable, and fully deterministic scoring framework

4. Banking Interpretation DECISION LAYER
Risk assessment and tailored business recommendations

5. Optional AI Summary NARRATIVE LAYER
LLM-based narrative generation for executive summaries (On Demand)

KEY ARCHITECTURE PRINCIPLES

Modularity
Each layer functions independently, allowing for easy updates and data source scaling.

No Black Box
The core scoring engine is purely mathematical and rule-based, ensuring full transparency.

AI Isolation
Generative AI is strictly separated from the decision logic to maintain regulatory compliance.

BUSINESS IMPACT

OPERATIONAL EFFICIENCY

~30 minutes saved per SME pre-analysis

1,000 SMEs/year → ~500 hours saved

COMMERCIAL PRIORITIZATION

Structured opportunity ranking

Improved first-meeting relevance

RISK EARLY FLAGGING

Preliminary adverse-media detection

Enhanced portfolio visibility

"This prototype evolves naturally into a portfolio prioritization and monitoring engine."

THANK YOU

UNICREDIT
